

The experience at Coady is helping me to develop the most appropriate tools to make gender mainstreaming operational and to contribute, through communication, to the adaptation of climate change in my country.

Carina Osio

Communication Responsible

Proyecto Biocultura y Cambio Climático, Bolivia

I am implementing a communication strategy, carried out in six main cities of Bolivia, 27 municipalities and more than 400 communities, with the objective of promoting institutional capacities for the implementation and sustainable financing of climate resilience and the development of vulnerable communities to climate change effects. The approach seeks for the effective recognition of gender equality.

Proyecto Biocultura y Cambio Climático is a joint effort between the Swiss Cooperation and the Government of Bolivia. The main aim is to contribute to the achievement of the “Vivir Bien”(Well Being) of peasant-Indigenous communities in the Andean zone of Bolivia, in a climate change environment. “Vivir Bien” is the paradigm of the Bolivian state, established in its constitution, which seeks the enjoyment of material goods in harmony and complementarity with Mother Earth.
