

“My ambition is to be able to add more value to my organization and society by increasing my knowledge and skills. I know that what I will take away from this course will help me to become a better, more productive leader.”

Rihab Mohamed Elmahdi Ibrahim

Founder and director

Women in Technology for Development, Khartoum, Sudan

My job is to ensure that we continue our work to improve public access to information related to gender and women’s issues and to enhance computer literacy among women. In addition to strategic planning, I am creating and updating a central database of women’s issues in Africa and Middle East, with a focus on their social, cultural and political rights.

WTD was established with support from diverse professionals in order to keep pace with the rapid advancement in the fields of information technology and to bridge the IT gap for women. With the realization that IT skills are crucial for improving the status of women, we provide computer skills training for women to enhance their computer literacy and techniques.
